HENDERSON'S VEGETABLE SEEDS

The Choice of Progressive Market Growers

All of the varieties listed in this catalog were bred and selected with one object in mind, and that is to produce profitable crops for the commercial grower. Our offerings include the most desirable types for the long distance shipper, as well as those that appeal primarily to the local market trade. Whether your market is far or near, Henderson's seeds produce the crops that bring good returns.

Owing to crop shortages on many items, it is advisable to place your order early.

NOTE—All prices quoted in this catalog are subject to change without notice.

The strain we offer of this well known variety is without doubt the best main crop beet in existence. Tops very uniform, medium to small in size. Roots globe shape with a small slender tap root, dark blood red. Flesh exceptionally uniform in color which is deep blood red. The zones are so indistinct that the flesh appears to be a solid color. GREEN TOP WONDER

This is an early, extremely attractive variety for bunching. The tops are of a greyish-green color that remains green even late in the fall, when the tops of the ordinary Early Wonder turn to a deep purplish-red. The roots are nearly round during the early stages of growth, but at maturity are slightly flattened; exceptionally smooth, deep red in color. The interior is bright blood-red; practically free from zoning. A most desirable bunching variety.

WINTER KEEPER—also called "LONG SEASON" and "NEW CENTURY"

A large, late, slow growing variety of high quality. However, the beets can be used at any stage of growth and regardless of their size and age, are always tender and deliciously sweet. The tops are large and green. The roots are large, tapering, and often reach a size of 6 inches in diameter. The flesh is dark red, entirely free from light zoning. A very desirable variety for roadside market or other special quality trade, but not well suited for commercial market.

Henderson's Famous Snowball

HENDERSON'S PRIMOSNOW.

This outstanding extra early variety was introduced by us and is now recognized as the leading first early variety. The heads or "flowers" possess many of the characteristics of our famous Snowball—good form, good size, great depth, and a beautiful snow-white color, free from riciness or leafiness. The plant is sturdy; the foliage of fine form; the inner leaves being incurved give ample protection to the developing "flower". Primosnow is the earliest high quality Cauliflower that has ever been developed. It is ready to cut fully 8 to 10 days before such strains as Snowball or Erfurt and is of such uniform maturity, that practically the entire crop may be cut at one time. Highly recommended for market growers and shippers.

HENDERSON'S SNOWBALL.

Excellent for Forcing—Dependable for Spring Crop—Unsurpassed for Fall Planting.

Market Growers the world over have used this strain year in and year out since it was first offered many years ago. We are continually receiving letters testifying to the dependability and general excellence of Henderson's Snowball. The widespread demand for this strain clearly indicates that it is adapted to the widest range of soil and climatic conditions of any variety of Cauliflower in existence.

The plants are of medium height, sturdy and vigorous. The outer leaves are of upright growth, while the inner ones fold over in such a way that the "flowers" are completely protected until they have reached a good size. The heads are uniformly large, deep, very solid, snow white, and under normal growing conditions are entirely free from leafiness. Attractiveness and quality are unequalled.

SUPER SNOWBALL.

This is an extra early strain of the Snowball type. Besides being extra early, the heads or "flowers" mature with greater uniformity, making it possible to harvest a large percentage of the crop in the first cutting.

The plants are vigorous and strong. The leaves, especially the inner ones are well folded or curled over the heads. The heads are large, uniform in size, deep, and solid. They mature early and many times the entire crop is harvested before any heads of the later types are ready. One of the most profitable varieties for market.

EARLY SNOWWHITE (SPECIAL NO. 25). We are pleased to offer this new outstanding early variety. It has shown up well in our Cauliflower trials, and the commercial growers who have tried out this new type, are very enthusiastic about its merits. The plants are sturdy and somewhat taller growing than Primosnow. The inner leaves fold over the heads and overlap each other in such a way that added protection is given to the "flowers" until they are well developed. Even the outer leaves which are straight and upright, are inclined to curve inward at the tip.

The heads are large, of a uniform size, very deep, solid, exceptionally heavy, pure white, and of the highest quality. The well formed tight curd gives the heads a most attractive appearance. In season EARLY SNOWWHITE is a few days later than Primosnow, but practically as uniform in maturity.

Protect Your Corn Crop with Semesan Jr.

1½ oz. will treat 1 bushel of seed.

Semesan Jr. dry treatment of hybrid Sweet Corn helps to reduce the loss of seed through rotting, which is caused by the harmful fungi such as Diplodia and Gibberella, which are often present in the soil. Besides preventing missing hills due to this cause, it also improves stands and sturdiness of the corn seedlings and generally increases the yield. It is safe and easy to apply, and the cost per acre is negligible.

CREAM O'GOLD IS THE BERRIES.

Your naming it Cream of Gold Deluxe is the berries. I don't think you can ever improve on it. I call it the Ideal Sweet Corn. I wish everybody knew about it. I am sure you couldn't supply the demand. I just had to write you in appreciation of this wonderful corn. Many thanks. We will use Cream O'Gold Deluxe from now on.

C. A. GREGORY,
Binghamton, N. Y.

First of all, I want to observe that in Henderson's Cream O'Gold Corn you have something very, very special. It was the only sweet corn around Bluffton that amounted to a hoat last year. We had a bad drought and the Golden Bantam and all other breeds just curled up and died. But the Cream O'Gold stayed green and sturdy and what we considered so surprising was that we did not find a single ear that was worm-infested.

CHARLES C. MOSES,
Bluffton, S. C.

I had some Cream O'Gold last year and two years ago and consider it the best I ever used.

IMPERIAL NO. 44.

This new Iceberg type was developed by Dr. I. C. Jagger of the U. S. Department of Agriculture. During 1936 and 1937 test plantings of Imperial No. 44 were made in various lettuce growing muck districts of the East. The variety looked so promising in these tests, that lettuce growers throughout the muck sections are very enthusiastic about the possibilities of this new variety. Although not extensively tried on upland soils, we believe it will be suitable there as well. Imperial No. 44 produces large, hard, well formed heads, uniform in size. In comparative test plantings, it has produced a good percentage of hard heads when nearby plantings of commercial strains proved worthless.

ASTERS

The Improved Strains of China Asters, the showiest and most useful of our Summer Cut Flower Annuals, are now staging a remarkable comeback with the development of the wilt resistant strains.

WILT RESISTANT STRAINS

Through the use of wilt resistant seed, success may be had where the soil is infected with wilt fungus, where it has been impossible to grow perfect flowering plants. It is not claimed, however, to be immune from Aster "yellows" and other Aster diseases or insect pests.

Henderson's Famous Invincible

THE ASTER DE LUXE (Wilt Resistant). Immense Flowers—Long Stems—Ideal Forms and Colors. Henderson's Invincible are a superior race in every way. The plants are of healthy, robust, branching growth, about 2 feet high—and under best culture often 3 feet—producing, on long stems, massive Chrysanthemum-like flowers of perfect form and graceful outline, exceedingly double to the very center. The flowers are the most beautifully formed of all large Asters. When well grown the flowers of Henderson's Invincible Asters average 3½ inches across; 4-inch flowers are quite common, if grown especially for cut flowers and the side branches pruned, allowing a plant to carry not over 8 or 10 flowers, one flower to a stem.

STOCKS DOUBLE GIANT (Column Gardenia)

3748 **Stock Gardenia**. As lovely and elegant as the exotic Gardenia from which it borrows its name, this new Stock is the crowning achievement of the plant breeder's efforts. With superbly formed magnificent spikes composed of individual florets 2 to 2½ inches in diameter, this remarkable new Giant Column Stock is indeed the last word in perfection for its class. Shimmering glistening white, the flowers are the purest snow white of any Stock variety yet introduced. Producing only one flower spike to a plant, this spike will however be of enormous size 12 to 15 inches of florets and nearly 3 feet in length, and 4 or even 4½ inches in depth, with individual florets closely and compactly placed on the stem. The robust habit and uniformity of type combined with a high percentage of doubles places Gardenia definitely in a class by itself with no peer among the finer flowers for high class florist trade.

THE IMPORTED SCOTCH CHAIN HARROW

Greenkeepers on Golf Courses
 Groundsmen on Athletic and Polo Fields
 Landscape Engineers, Contractors
 Gardeners and Farmers

All acclaim the **IMPORTED SCOTCH CHAIN HARROW** as the most valuable implement on the market for surface pulverizing and leveling. They say it is far superior to the average disc or tooth harrow, as it not only pulverizes the soil thoroughly, but also fills in all inequalities in the ground, thus insuring a smooth even surface for seeding grass or farm crops.

As the final surface smoother on grading jobs it is without an equal, for it obliterates all motive power marks completely. This implement has been in use for years on race tracks, driveways, etc., for smoothing out footprints and ruts.

The heavy links are fashioned by skilled workmen in Scotland from solid wrought iron and are therefore very durable. When not in use it may be rolled up very compactly, so as to occupy a minimum amount of storage space.

Sow The "Henderson" Lawn Grass Seed

and Obtain a Grassy Carpet of Unrivalled Emerald Green
IN FOUR WEEKS FROM SOWING IT IS READY FOR MOWING

Henderson's celebrated Lawn Grass Seed Mixture has been thoroughly tested by a country-wide use during three-quarters of a century. It is the fruit of years of our personal experience and study, coupled with that of many of America's foremost gardeners, who steadfastly maintain and unite with us in saying that it has no superior for American conditions and the American climate. The rapidity with which it will form a deep green velvety turf, has been the delight of gardeners since its introduction, for, under ordinary conditions, the bare soil will be clothed with an emerald carpet of living green in four weeks' time.

PRICE OF THE "HENDERSON" LAWN SEED

Price 45c	\$2.10	\$4.00	\$10.00	\$37.50

STANDARD LAWN SEED

This is a blend that is far superior to the low priced lawn seed usually offered. It should be of special interest to florists and contractors for use on development projects. Although this seed is not recommended for a permanent lawn, like the Henderson blend, it does not, on the contrary, give a flash-in-the-pan, but produces a fine durable turf. Sow at the rate of 1 pound to 200 square feet.

Price 30c	\$3.00	\$7.00	\$25.00

TOUGH TURF

The turf required for outdoor sports must be closely interwoven, firm, elastic, smooth, and durable to stand the wear and tear. These requirements are met in this mixture, which is composed of fibrous, deep-rooting Grasses that spread and intermingle. The seeds are blended in the proper proportions to form and maintain a tough matted sward, constantly green, even in dry weather.

Price 45c	\$2.10	\$4.00	\$10.00	\$37.50

TERRACE SOD

This is a special mixture of Grasses best suited for sowing on terraces, embankments and hillsides; Grasses that produce long, strong, spreading roots; thus preventing heavy rains from washing them out; that will withstand drought, thrive on shallow soils, and at the same time produce a rich, velvety-green turf throughout the season.

SHADY NOCK

The Ideal Mixture for Shaded Areas

On nearly all lawns there are unsightly bare spots under the shade of trees, which have baffled all efforts to get into Grass, but with this mixture there need be no further difficulty. It is a combination of fine, dwarf growing, evergreen varieties, which in their wild or natural state are to be found growing in the woods or other sheltered and shaded spots. Ground that has been densely shaded by trees is frequently "sour," and if the drainage is defective it is apt to be covered with moss and coarse Grasses. In such cases an application of slaked lime, at the rate of one hundred pounds to each thousand square feet, or two tons to the acre, is an excellent corrective and sweetener, but the moss should be first raked off.

lb.	5 lbs.	10 lbs.	25 lbs.	100 lbs.
Price 60c	\$2.75	\$5.25	\$13.00	\$50.00

SPECIAL "BENT FORMULA"

A combination of the finest re-cleaned Grasses, using as a basis for this mixture the imported and domestic Bent Grasses which are so largely used in the finer Putting Greens of today.

A lawn seeded with this mixture and properly cared for will in truth make every lawn a Putting Green. On a lawn of this type, Clock Golf and other lawn games may be enjoyably played.

It is imperative in maintaining a lawn of this type, that the grass should be kept cut short and well rolled all through the season. Starvation of the grass plants is the most frequent cause of unsatisfactory lawns, and grass needs constant small applications of fertilizer and plenty of water to maintain a perfect lawn.

lb.	5 lbs.	10 lbs.	25 lbs.	100 lbs.
Price 80c	\$3.75	\$7.50	\$17.00	\$60.00

SEASIDE

Our "Seaside" mixture will make a good turf of green on sand where the finer Grasses will not thrive, of course, the sand must be top-dressed with not less than 2 inches of soil before even our "Seaside" Grass Seed is sown, to enable the young Grass to get a start, after which the long roots—peculiar to the varieties we used in this mixture—drive down deeply in the sand and remain permanently self-sustaining, if attention is given to sprinkling during dry weather.
